# Singular Value Decomposition: Overview

# Singular Value Decomposition A = LU, A = QR, $A = VPV^{-1}$

$$A = LU$$
,  $A = QR$ ,  $A = VDV$ 

### Theorem 1 (SVD)

Let  $A \in \mathbb{C}^{m \times n}$ . Then A can be written as (m7/n) (SVD)

where  $U \in \mathbb{C}^{m \times m}$  and  $V \in \mathbb{C}^{n \times n}$  are unitary and  $\Sigma \in \mathbb{R}^{m \times n}$  is diagonal. If A is real, then so are U and V. > Canalog of orthogonal

- The columns of U are called the **left singular vectors** of A:
- The columns of V are called the **right singular vectors** of A;
- The diagonal entries of  $\Sigma$ , written as  $\sigma_1, \sigma_2, \ldots, \sigma_r$ , for  $r = \min\{m, n\}$ , are called the **singular values** of A and they are nonnegative numbers ordered as

$$\underline{\sigma_1} \geqslant \underline{\sigma_2} \geqslant \cdots \geqslant \underline{\sigma_r} \geqslant 0.$$

Singular Value Decomposition (cont') SVD for real matrices Let A & IR mxn. Then  $A = U \sum V^{1}$ where  $U \in \mathbb{R}^{m \times m}$  and  $V \in \mathbb{R}^{n \times n}$ are orthogonal, and  $\Sigma \in \mathbb{R}^{m \times n}$ is diagonal.

#### Thick vs Thin SVD

Suppose that m > n and observe that:

$$U\Sigma = \begin{bmatrix} \mathbf{u}_1 & \cdots & \mathbf{u}_{n-1} & \mathbf{u}_n & \cdots & \mathbf{u}_m \end{bmatrix} \begin{bmatrix} \sigma_1 & & & \\ & \ddots & & \\ & & \sigma_n \end{bmatrix}$$
$$= \begin{bmatrix} \mathbf{u}_1 & \cdots & \mathbf{u}_{n-1} & \\ & \ddots & \\ & & \sigma_n \end{bmatrix} = \hat{U}\hat{\Sigma}.$$

# SVD in MATLAB

- Thick SVD: [U, S, V] = svd(A);
- Thin SVD: [U, S, V] = svd(A, 0);
- . If only want Singular values:

$$\rangle\rangle$$
 S = 5vd(A); % S is a col. vec.

. If only want, say, V:

$$\rangle$$
 [ $\omega$ ,  $\omega$ ,  $\vee$ ] =  $svd(A)$ ;

To confirm  $A = U \sum V^*$ :

# **Understanding SVD**

## Geometric Perspective

Write 
$$A=U\Sigma V^*$$
 as  $AV=U\Sigma$ : 
$$A\mathbf{v}_k=\sigma_k\mathbf{u}_k,\quad k=1,\ldots,r=\min\{m,n\}.$$

Each right singular vector  $\mathbf{v}_k$  is mapped by A to a scaled left singular vector  $\sigma_k \mathbf{u}_k$ ;  $\sigma_k$  is the magnitude of scaling.

可》写

AV2 = 02 U2 target

 $A\vec{v}_i = \vec{v}_i \vec{u}_i$ 

The image of the unit sphere under any  $m \times n$  matrix is a hyperellipse.

Algebraic Perspective 
$$A \in \mathbb{C}^{m \times n}$$
,  $A = U \supseteq V^*$ 

Alternately, note that  $\mathbf{y} = A\mathbf{z} \in \mathbb{C}^m$  for any  $\mathbf{z} \in \mathbb{C}^n$  can be written as

Alternately, note that 
$$\mathbf{y} = A\mathbf{z} \in \mathbb{C}^*$$
 for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{y} = A\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{y} = A\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{y} = A\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{y} = A\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{y} = \mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{y} = \mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  can be written  $\mathbf{z} \in \mathbb{C}^*$  for any  $\mathbf{z} \in \mathbb{C}^*$  coord.

- because  $U^*\mathbf{y}$  is the coordinates of  $\mathbf{y}\in\mathbb{C}^m$  with respect to the basis consisting of ) 75 with columns of U, which is an ONB.
  - $V^*\mathbf{z}$  is the coordinates of  $\mathbf{z} \in \mathbb{C}^n$  with respect to the basis consisting of columns of V, which is an ONB.

Any matrix  $A \in \mathbb{C}^{m \times n}$  can be viewed as a diagonal transformation from  $\mathbb{C}^n$  (source space) to  $\mathbb{C}^m$  (target space) with respect to suitably chosen orthonormal bases for both spaces.

#### SVD vs. EVD

Recall that a diagonalizable  $A = VDV^{-1} \in \mathbb{C}^{n \times n}$  satisfies

$$\mathbf{y} = A\mathbf{z} \longrightarrow \left(V^{-1}\mathbf{y}\right) = D\left(V^{-1}\mathbf{z}\right).$$

This allowed us to view any diagonalizable square matrix  $A \in \mathbb{C}^{n \times n}$  as a diagonal transformation from  $\mathbb{C}^n$  to itself<sup>1</sup> with respect to the basis formed by a set of eigenvector of A.

#### Differences.

- Basis: SVD uses two ONBs (left and right singular vectors); EVD uses one, usually non-orthogonal basis (eigenvectors).
- Universality: all matrices have an SVD; not all matrices have an EVD.
- **Utility:** SVD is useful in problems involving the behavior of A or  $A^+$ ; EVD is relevant to problems involving  $A^k$ .
